RE-ENERGIZE

Empowering the Green Transition in Renewable Energy

The Project

Re-Energize is a collaborative European project funded under the LIFE Programme, the EU's flagship funding initiative for environment and climate action. Our mission is to bridge the skills gap in the renewable heating and cooling sectors, with a special focus on heat pump technologies.

Through a set of strategic actions, we aim to boost energy efficiency, promote public engagement, and encourage the installation of sustainable technologies across various European regions.

The project will enhance professional competencies, foster collaboration among stakeholders, and support the EU's green energy goals.

Trainings in our partner countries

Partners have implemented two types of training: Training of Trainers (ToT), which prepares trainers to deliver heat pump content in their own organisations, and Professionals trainings, which reach installers, engineers, managers and decision-makers across the renewable heating and cooling workforce.

Couldn't attend in person? The same learning pathways are available online on the Re-Energize platform.

Co-funded by the European Union

Co-funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.

Learn on the Re-Energize platform

The Re-Energize Online Learning Platform is open at platform.re-energize.eu. It works on desktop, tablet and smartphone, so you can learn at your own pace.

- Structured learning pathways for professionals and for consumers
- Practical resources you can use on the job or at home
- Quizzes and assessment tools to check your progress
- Gamified, interactive learning to keep you engaged

Whether you are an installer, an engineer, a manager or a householder curious about heat pumps, log in and start learning today: platform.re-energize.eu/login

SKILLS4HP Cluster webinar

Re-Energize is part of the SKILLS4HP Cluster. The second cluster webinar, "From Skills Gaps to Heat Pump Deployment: What Works in Practice", has now taken place. The cluster projects shared practical lessons on closing skills gaps and speeding up heat pump deployment.

Re-Energize at the Energy Efficiency Directive forum

Re-Energize was presented at the 9th Plenary Meeting of the Concerted Action on the Energy Efficiency Directive (CA EED), held in Vilnius on 21–23 October.

CA EED gives representatives of EU Member States and Norway an informal, technical forum to learn from each other while transposing the Energy Efficiency Directive into national law. One session focused on LIFE Programme projects that improve heating and ventilation efficiency in buildings, and three projects were presented, including Re-Energize.
